

Statement by

Dra. Clara Yono Yatini, M.Sc.

Director of Space Science Center

National Institute of Aeronautics and Space of the Republic of Indonesia

Agenda Item 9: Recent developments in global navigation satellite systems

Thank you, Madam Chair.

Indonesia acknowledges the importance of GNSS application which has been widely used in the fields of transportation, land, and development interests.

As it stands, even though Indonesia does not yet have GNSS, Indonesia through its National Institute of Aeronautics and Space, continues to research and disseminate information related to ionosphere disturbances on the propagation of GNSS navigation satellite signals.

This research was further developed in a national collaboration with relevant governmental stakeholders in Indonesia.

Thank you, Madam Chair.
